

McGill University
Department of Economics
Econ 763: Time Series and Financial Econometrics
/ Séries chronologiques et économétrie de la finance
Winter / Hiver 2022
Course outline
(Preliminary)

Professor / Professeur: Jean-Marie Dufour

January- April 2022 / Janvier-avril 2022

Version: January 10, 2022

Economics (Arts) : This course covers advanced time series methods used in the analysis of financial data and other potentially non-stationary time series.

Topics: general time series theory, ARMA modelling, nonstationarity (unit root testing, cointegration), nonparametric methods, conditional heteroskedasticity, long memory.

Applications include: market efficiency, capital asset pricing econometrics, heavy tail modelling, stochastic volatility.

Documents and other material relevant to the course will be available from my web page:

<http://www.jeanmariedufour.com>

<http://www.jeanmariedufour.org>

- **Lecture hours:** Monday 18:05 - 20:55.
- **Beginning:** Monday, 10 January 2022. **End:** Monday, 11 April 2022.
- **Official exam period:** April 13-29, 2022.
- **Add/Drop deadline:** Tuesday, January 18, 2022.
- **Room:** Leacock 541 or online (information to come)
- **Office hours:** by appointment

- **Teaching assistants:** Nazmul Ahsan [md.ahsan@mail.mcgill.ca]
- **TA sessions:** to be determined
- **e-mail:** jean-marie.dufour@mcgill.ca

The evaluation will be based on three elements (percentage refer to the entire year's grade):

1. a mid-term exam: 30%;
2. assignments (and possibly a term paper): 30%;
3. a final exam: 40%.

Students will also learn to use the R system to do statistical analysis related to the course.

In accord with McGill University's Charter of Students' Rights, students in this course have the right to submit in English or in French any written work that is to be graded.

McGill University values academic integrity. Therefore all students must understand the meaning and consequences of cheating, plagiarism and other academic offences under the Code of Student Conduct and Disciplinary Procedures (see www.mcgill.ca/students/srr/honest/) for more information).

L'université McGill attache une haute importance à l'honnêteté académique. Il incombe par conséquent à tous les étudiants de comprendre ce que l'on entend par tricherie, plagiat et autres infractions académiques, ainsi que les conséquences que peuvent avoir de telles actions, selon le Code de conduite de l'étudiant et des procédures disciplinaires (pour de plus amples renseignements, veuillez consulter le site www.mcgill.ca/students/srr/honest/).

Class schedule

Week	Day	Time (18:05-20:55)	
1	Monday	10 January 2022	
2	Monday	17 January 2022	
3	Monday	24 January 2022	
4	Monday	31 January 2022	
5	Monday	7 February 2022	
6	Monday	14 February 2022	
7	Monday	21 February 2022	Mid-term exam
8	Monday	28 February 2022	Study break
9	Monday	7 March 2022	
10	Monday	14 March 2022	
11	Monday	21 March 2022	
12	Monday	28 March 2022	
13	Monday	4 April 2022	
14	Monday	11 April 2022	End of lectures
15	Monday	18 April 2022	Final exam (time to set)

The following textbooks will be used in this course.

Brockwell, D. and Davis, R. A. (1991). Time Series: Theory and Methods, Second Edition. Springer-Verlag, New York. (BD)

Hamilton, J. (1994). Time Series Analysis. Princeton University Press, Princeton, NJ. (H)

Course outline

1. Mathematical preliminaries
 - (a) Distribution and quantile functions
 - (b) Moments
 - (c) Covariances and correlations
 - (d) Asymptotic theory
 - (e) Hilbert spaces
 - (f) Difference equations
 - (g) Complex analysis and power series
2. Time series analysis
 - (a) Introduction
 - (b) Stochastic processes
 - i. Basic theory
 - ii. Spectral analysis
 - (c) Prediction and efficient markets
 - (d) Continuous time models
 - (e) Testing random walk and predictability
 - (f) Nonstationarity
 - (g) Building univariate time series models
 - (h) Multivariate time series models
 - (i) Long memory
3. Financial econometrics
 - (a) Introduction: the problems of financial econometrics
 - (b) Portfolio theory and the Capital asset pricing model (CAPM)
 - (c) Volatility modelling
 - i. The role of volatility modelling
 - ii. Conditional heteroskedasticity: GARCH and stochastic volatility
 - iii. Computationally efficient methods for volatility modelling: estimation and inference
 - iv. Financial applications: Risk Management (VaR and Expected Shortfall), Portfolio Choice, Option pricing

- v. Macroeconomic applications: VAR, DSGE, and time-varying uncertainty measures.
- vi. High-dimensional and high-frequency data
 - A. Realized volatility
 - B. Methods for estimating models for high-dimensional and high-frequency data
- (d) Heavy tails: theory and inference
- (e) Factor models
- (f) Dynamic optimization models and GMM
- (g) Quantile methods and value at risk
- (h) Option pricing
